

The threats are getting smarter and more persistent.

IS YOUR SECURITY STRATEGY KEEPING PACE?

GCOMM works with you to protect your business network, applications and data with integrated threat defense. Our adaptive security solution provides comprehensive protection that predicts, prevents, detects and responds to advanced persistent threats.

HOW SECURE IS YOUR BUSINESS?

As organisations embrace digital transformation, a growing number of assets are becoming connected to the Internet. Today, most companies rely on cloud-based applications for critical business operations. Many employees use personal devices to conduct business. With these new trends, the network boundaries have become blurred, and companies find themselves more vulnerable and exposed to increasingly intelligent and persistent cyber threats.

THE BAND-AID APPROACH IS NOT ENOUGH. IT'S TIME FOR A NEW ACTIVE SECURITY STANCE.

Being secure is a continuous motion rather than a point in time. Most organisations mistakenly believe that 100% protection is possible and they have become overly reliant on blocking-based and signature-based mechanisms for protection. The market is flooded with software that addresses individual threat vectors, but are not interoperable and do not provide a comprehensive security defense.

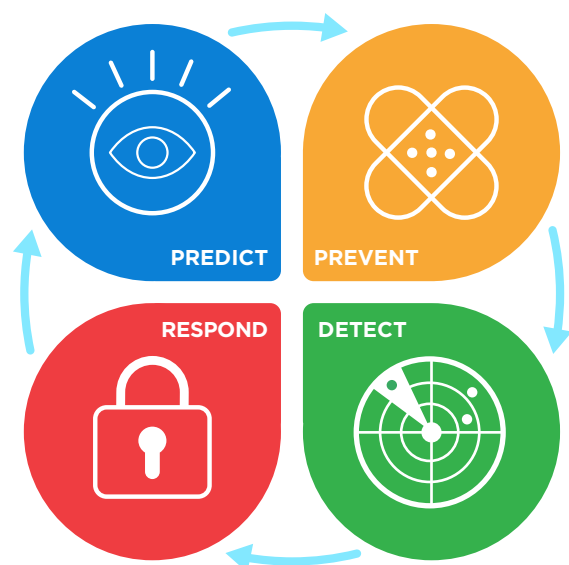

“Security leaders must shift their mindset from incident response to continuous response, spend less time on prevention and invest in detection and response.”

Earl Perkins, Research Vice President, Gartner

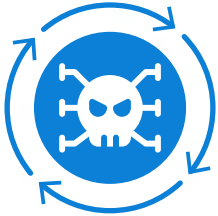

GCOMM USES A NEW ADAPTIVE, PERSISTENT DEFENSIVE APPROACH TO SECURITY

Working closely with Cisco security engineers, GCOMM has engineered a comprehensive adaptive security offering that integrates predictive, preventive, detective and response capabilities that help defend your business from advanced, continuous threats and malicious attacks.

DEFEND YOUR DIGITAL ASSETS WITH GCOMM SECURITY

We use a comprehensive adaptive strategic approach to security that balances “block and prevent” functions with “detect and respond” capabilities.

ADDRESS THE CYBER KILL CHAIN

Our security experts will work with you to implement methods that help prevent or detect and respond to threats at each stage of the cyber kill chain. This will significantly increase the defensibility of your environment since the attackers need to successfully execute all phases of the kill chain.

SHORTEN THE TIME TO DETECTION AND RESPONSE

We will implement an integrated, effective security posture for your organisation that involves tightly coupling the time to detection and the time to respond. Our solution will reduce the time to detection to minutes rather than days, weeks or even months.

AN INTELLIGENT, INTEGRATED AND CONTEXTUAL APPROACH TO SECURITY

GCOMM professional services can consult, understand and implement a security posture that will prevent well known attack vectors, give you the ability to detect unauthorised entry and to remediate effectively in the event of compromise. We integrate the intelligence of the cloud with contextual information sharing between security sensors to address the entire scope of before, during and after an attack.

business customers across the country

ABOUT GCOMM

GCOMM provides connectivity, cloud and managed IT services to small, medium and enterprise businesses across Australia. We combine our strong network foundation, engineering capabilities and partnerships with recognised technology vendors to enable our clients to transform their business for the future. Established in 1996 in Queensland, GCOMM has grown to offer a range of technology solutions through a direct and wholesale channel. The company has won several awards and our engineers hold leading industry certifications.
